

Electrical distribution box installed in server rack

Overview

A Rackmount PDU is specially designed to fit into server racks, distributing electric power to servers, networking hardware, and other data center equipment. With multiple outlets and the ability to handle high-load equipment, it's the linchpin of a well-run server setup. Dedicated cables deliver electricity to individual racks. The proper installation of power distribution units (PDUs) ensures that the sensitive electronic equipment receives a stable and consistent power supply, reducing the risk. A server power distribution unit helps you deliver power to multiple server devices efficiently and safely. Certified PDUs, such as those from NBYOSUN, feature key safety certifications. Eaton's rackmount PDU offering provides you with the power density and flexibility you require regardless of whether you're looking for PDUs for server racks or switching environments.
