Huijue G652D Single-Mode Fiber Optic

Overview

They are coated with a dual layer, UV cured acrylate based coating. This enhanced single mode fibre provides improved performance across the entire 1260 nm to 1625 nm wavelength spectrum due to its low attenuation in 1383 nm, the water-peak region. D single-mode optical fiber is not only widely used for voice transmission, data, video, and other services, providing customers with high-cost performance and quality products, but it also extensively serves major telecommunications carriers. It is suitable for building backbone. The ITU-T G. D Single-Mode Optical Fibre Specifications *Values for cabled fibre, local attenuation discontinuity ≤0. Fiber Optic Pigtail is the basic passive components of Optical Fiber Telecommunication System,are utilized to achieve accurate mounting for precision alignment of fiber optical components. HJ provide high quality optical fiber Pigtails,100% tested quality guarantee before.

Optical Fiber Types

ITU G.653 Covers single-mode dispersion-shifted optical fiber. Dispersion is minimized in the 1,550-nm wavelength range. At this range attenuation is also minimized, so longer distance cables are possible.

Introduction to G652D Fiber

The advantages of optical fiber technology have offered many applications for G652D fibers. ITU-T G652D single-mode fibers are primarily used in networking and communication.
